This document originally appeared as a blog post on my website. Find it at gautammanohar.com/euler/8.

## 1 Problem Statement

Find the greatest product of K consecutive digits in the given N digit number.

## 2 My Algorithm

We use a brute force solution. There are N-K+1 possible K-length substrings of a string of length N. We convert the given number to a string, find the substrings, and multiply the digits in them. We then find the maximal product. This is easily done with time complexity O(K(N-K+1)).
